

FACT SHEET

The tablet your field officers carry.

Routes, group meetings, and cash and M-Pesa collection, built to keep working without a signal and to land in the one ledger your branch runs.

WHAT IT IS

Sacco is core banking for SACCOs and MFIs on Apache Fineract. **Sacco Field** is its Android tablet app for field officers. What the officer captures in the market goes to the same ledger the branch keeps.

WHAT THE OFFICER CAN DO TODAY

- **Today's route, worst first.** Overdue stops lead the list, from the day's collection sheet.
- **Group meetings.** Every member, what is due, attendance, and a keypad for the amount.
- **Collect money.** Cash, M-Pesa push, paybill, and passbook deposits.
- **Member quick view.** Loans, savings and recent activity from the ledger, in one glance.
- **Loan applications.** Started from a panel beside the member.
- **Member files, centres and groups.** Accounts, signatories, documents, meeting calendar.
- **Sync centre.** What failed, what is waiting, what is done, kept for thirty days.

WHAT STAYS WITH THE BRANCH

- **The vault.** The tablet takes money in. It never pays money out.
- **Approvals.** A loan application is sent from the field; approval and payout stay with the back office.
- **Permissions.** What an officer may do is set by the ledger's own roles.

Try it with no server: the app carries a labelled demo day with sample members.

THE RULE THE WHOLE APP KEEPS

Sacco Field has four words for where money is, and uses no others:

Waiting to sync

Posted

Failed

Discarded

"Sent" is not "paid". An M-Pesa push is a request the member has to accept; the tablet says PUSH SENT and waits. Nothing says Posted before the ledger has confirmed it.

WITHOUT A SIGNAL

Every capture is written to the tablet first and sent when the connection returns. Sync runs by itself every fifteen minutes and whenever the connection comes back. A retry after a dropped connection is checked against the ledger before anything is sent again.

Today's route, overdue first

A group meeting with the keypad

Screens are captures of the app running its labelled demo dataset.

UNDER THE HOOD

Tablet app	Native Android (Kotlin, Jetpack Compose), landscape and portrait.
Ledger	Apache Fineract, with Sacco modules for mobile money.
Mobile money	M-Pesa push from the tablet, through Sacco's mobile-money module.
What you need	Android tablets (8.0 or later) and a Fineract tenant.
